

## Introduction to ML strategy

Why ML Strategy?

### Motivating example

90%

#### Ideas:

- Collect more data
- Collect more diverse training set
- Train algorithm longer with gradient descent
- Try Adam instead of gradient descent
- Try bigger network
- Try smaller network

- Try dropout
- Add  $L_2$  regularization
- Network architecture
  - Activation functions
  - # hidden units
  - •

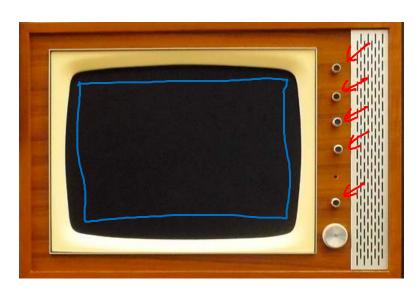

Andrew Ng

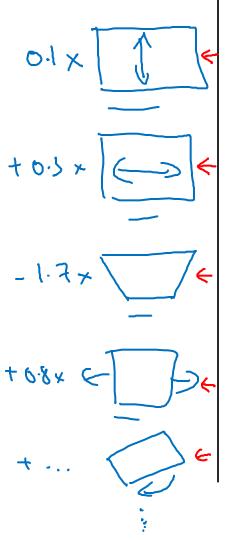

## Introduction to ML strategy

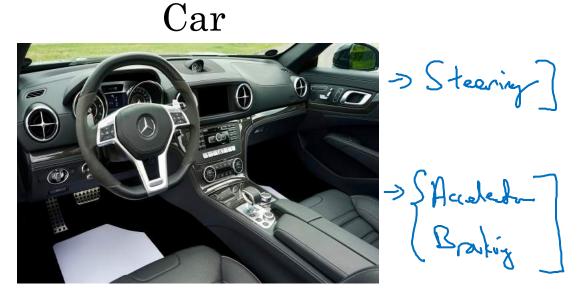

### Orthogonalization

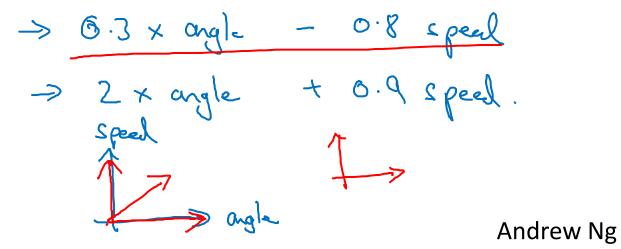

### TV tuning example

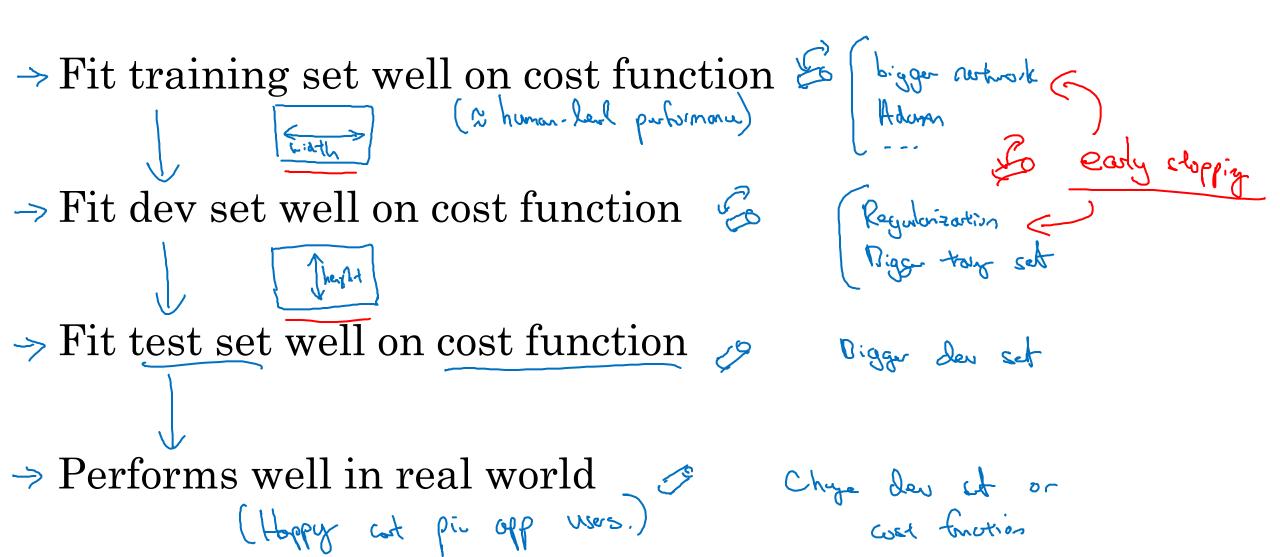

Orthogonlization

### Chain of assumptions in ML

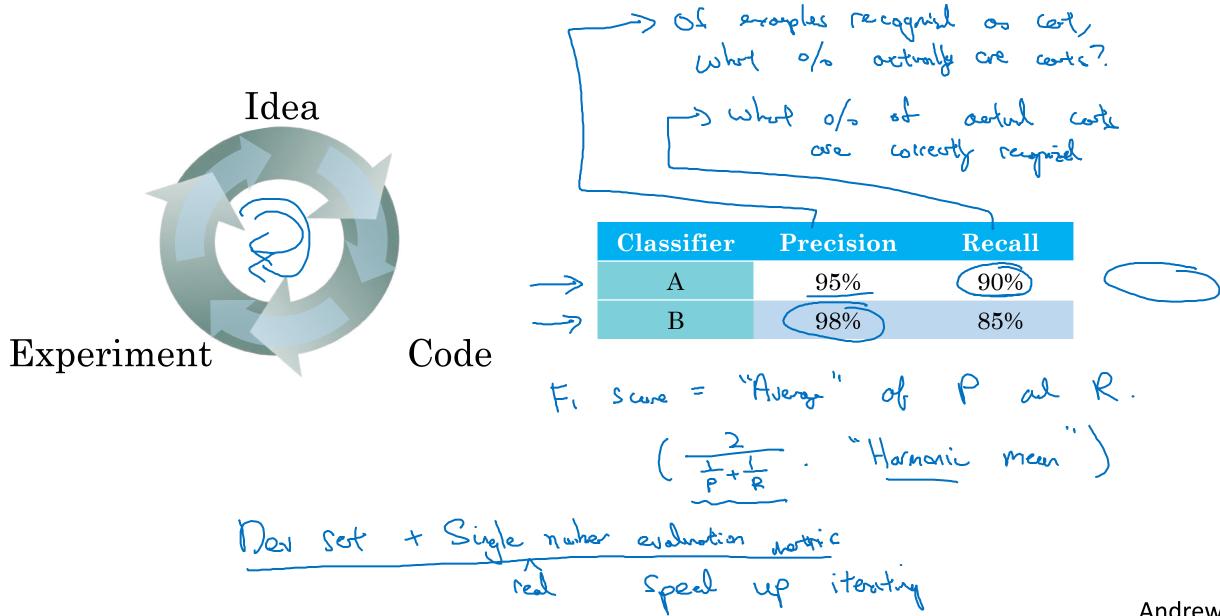

### Setting up your goal

# Single number evaluation metric

### Using a single number evaluation metric

### Another example

	2	V	V	V	
Algorithm	US	China	India	Other	
A	3%	7%	5%	9%	
В	5%	6%	5%	10%	
$\mathbf{C}$	2%	3%	4%	5%	
D	5%	8%	7%	2%	
E	4%	5%	2%	4%	
F	7%	11%	8%	12%	

### Setting up your goal

# Satisficing and optimizing metrics

#### Another cat classification example

optimizing		/	Soutisfi
Classifier	Accuracy	Running tir	
A	90%	$80 \mathrm{ms}$	
В	92%	$95 \mathrm{ms}$	<
C	95%	$1,500 \mathrm{ms}$	
moximize	accuracy		
Suggeon to	running Times	100 MS.	
N metrico:	1 optimizing	<b>5</b>	
	N-1 Sortisfici	· <b>-</b> \chi	

Wakewords Trigger words Alexa, Ok Googh. Hey Siri, nihoobaiden 你好百度 accuray. # False positive

### Setting up your goal

# Train/dev/test distributions

#### Cat classification dev/test sets

Lovelopmit sot, hold out cross voludarin corp

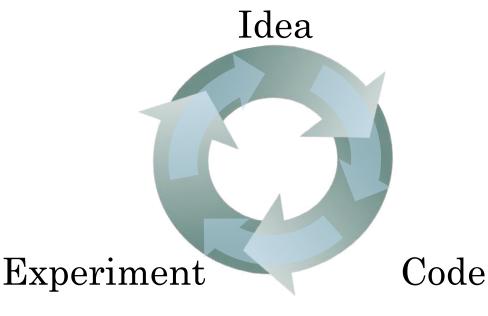

#### Regions:

- US
- UK
- Other Europe
- South America
- India
- China
- Other Asia
- Australia

dev set + Metric

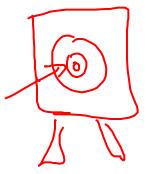

### True story (details changed)

Optimizing on dev set on loan approvals for medium income zip codes

A x -> y (repay loa?)

Tested on low income zip codes

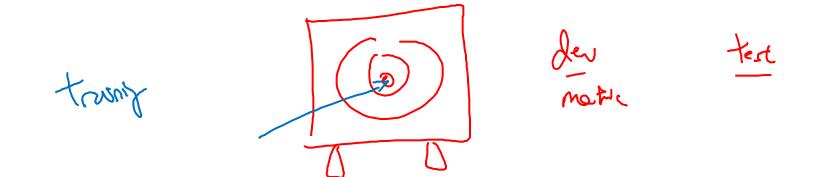

#### Guideline

Some distribution

Choose a dev set and test set to reflect data you expect to get in the future and consider important to do well on.

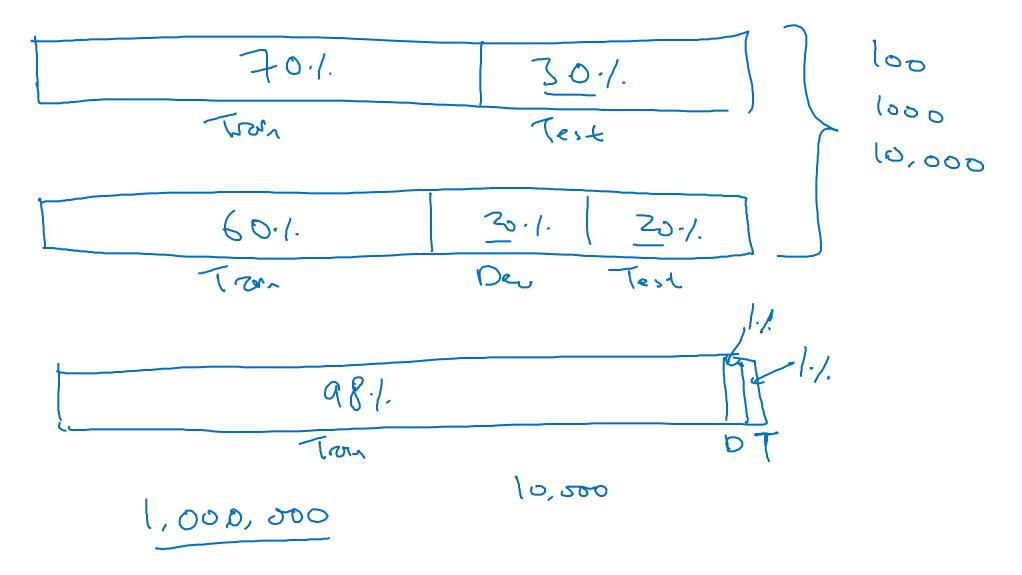

### Setting up your goal

# Size of dev and test sets

### Old way of splitting data

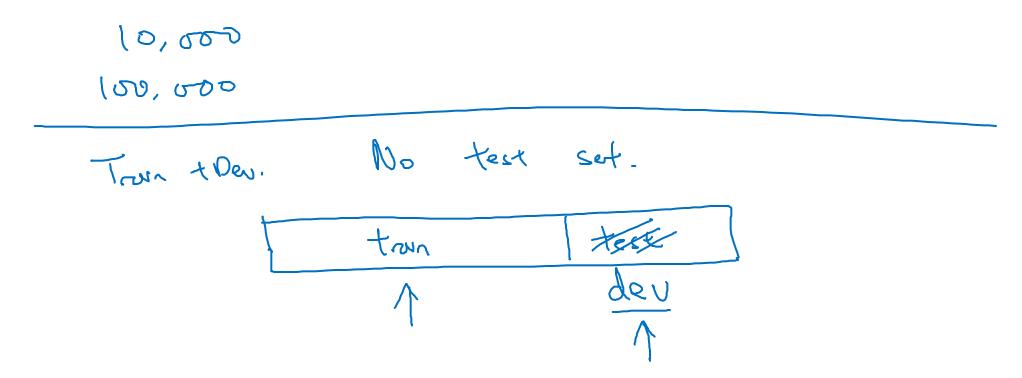

#### Size of dev set

A B

Set your dev set to be big enough to detect differences in algorithm/models you're trying out.

#### Size of test set

→ Set your test set to be big enough to give high confidence in the overall performance of your system.

## Setting up your goal

When to change dev/test sets and metrics

### Cat dataset examples

Motore + Der: Prefer A. Youlusons: Prefer B.

→ Metric: classification error

Algorithm A: 3% error

bornodobyic

/ Algorithm B: 5% error

### Orthogonalization for cat pictures: anti-porn

→ 1. So far we've only discussed how to define a metric to evaluate classifiers. - Place togt to

→ 2. Worry separately about how to do well on this metric.

### Another example

Algorithm A: 3% error

✓ Algorithm B: 5% error ←

→ User images

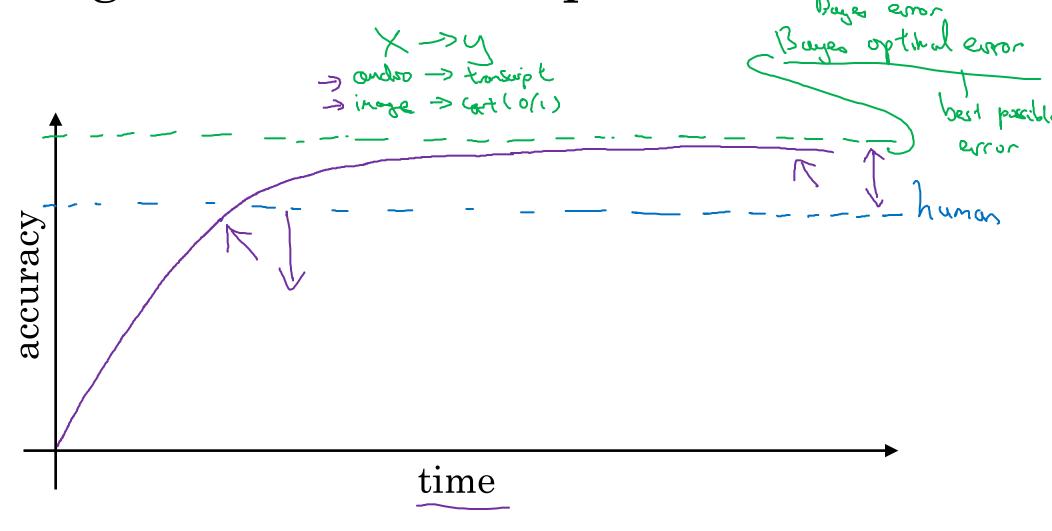

If doing well on your metric + dev/test set does not correspond to doing well on your application, change your metric and/or dev/test set.

## Comparing to human-level performance

# Why human-level performance?

#### Comparing to human-level performance

### Why compare to human-level performance

Humans are quite good at a lot of tasks. So long as ML is worse than humans, you can:

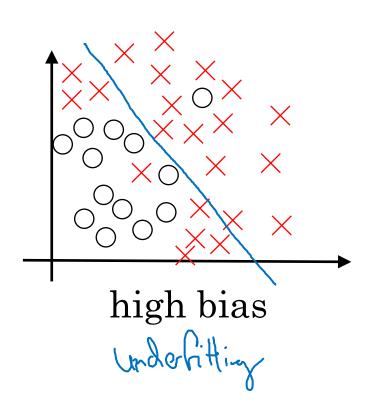

- $\rightarrow$  Get labeled data from humans. (x, y)
- Gain insight from manual error analysis: Why did a person get this right?
- → Better analysis of bias/variance.

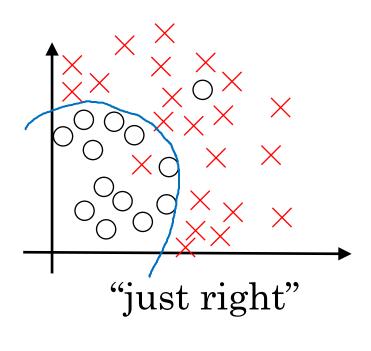

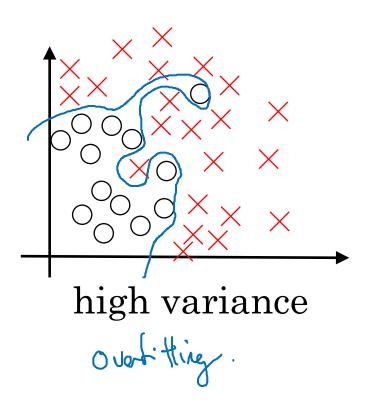

### Comparing to human-level performance

### Avoidable bias

#### Bias and Variance

#### Bias and Variance

Cat classification

Training set error:

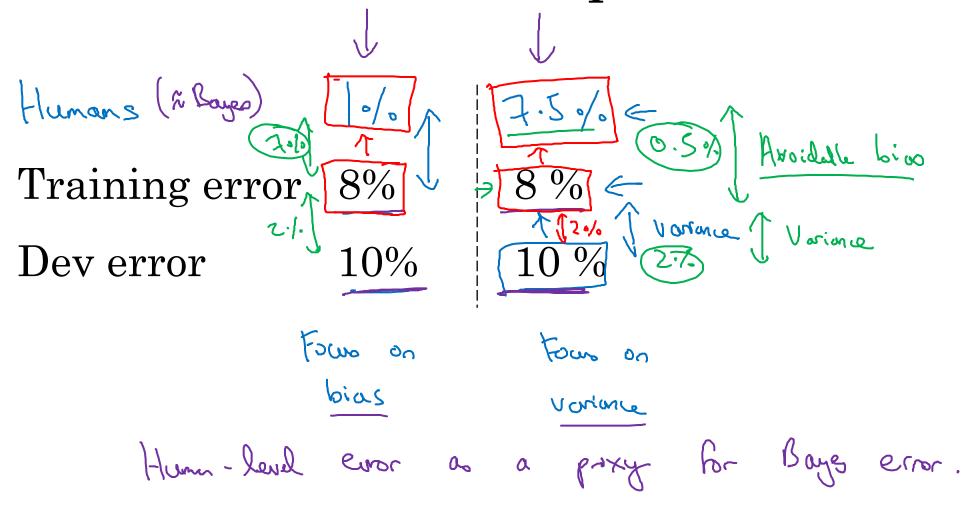

Dev set error:

high vortone high bies high bies low bies high vorione low vorione

#### Cat classification example

## Comparing to human-level performance

Understanding human-level performance

### Human-level error as a proxy for Bayes error

Medical image classification example:

#### Suppose:

(c) Experienced doctor ...... 0.7 % error

 $\rightarrow$  (d) Team of experienced doctors .. 0.5 % error  $\leftarrow$ 

What is "human-level" error?

Baye enor 5 0.50/3

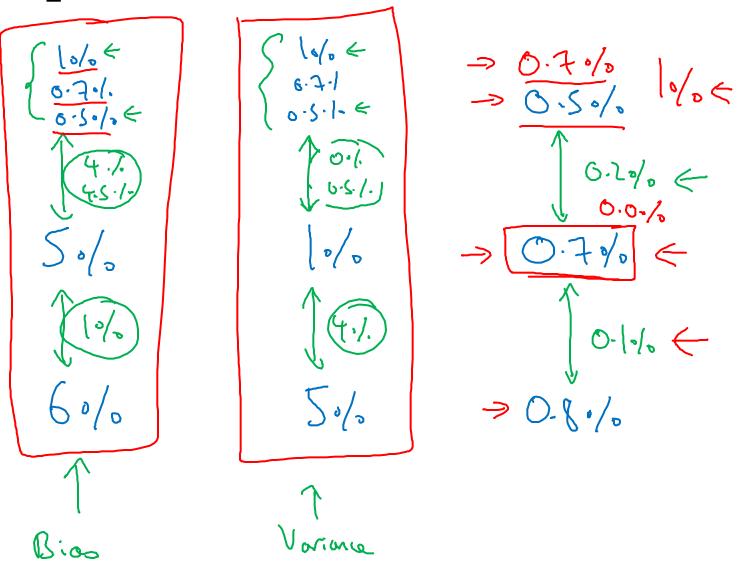

### Error analysis example

Training error

Dev error

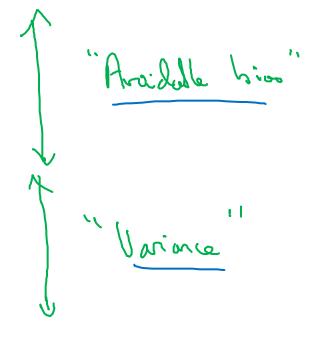

### Summary of bias/variance with human-level performance

Human-level error

Training error

Dev error

## Comparing to human-level performance

### Surpassing humanlevel performance

### Surpassing human-level performance

Team of humans

○ · S ∘/₀

One human

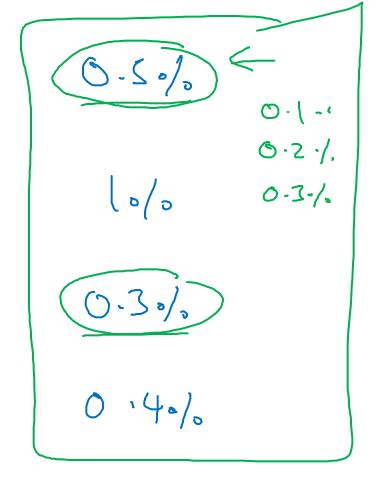

0-1

Training error

70.6%

Dev error

5.80/5

What is avoidable bios?

### Problems where ML significantly surpasses human-level performance

- -> Online advertising
- -> Product recommendations
- -> Logistics (predicting transit time)
- -> Loan approvals

```
Structul dorta
Not North perception
Lots of losta
```

```
- Speech recognition
- Some inoge recognition
- Medul
- ECG, Skin censor,...
```

### Comparing to human-level performance

Improving your model performance

### The two fundamental assumptions of supervised learning

1. You can fit the training set pretty well.

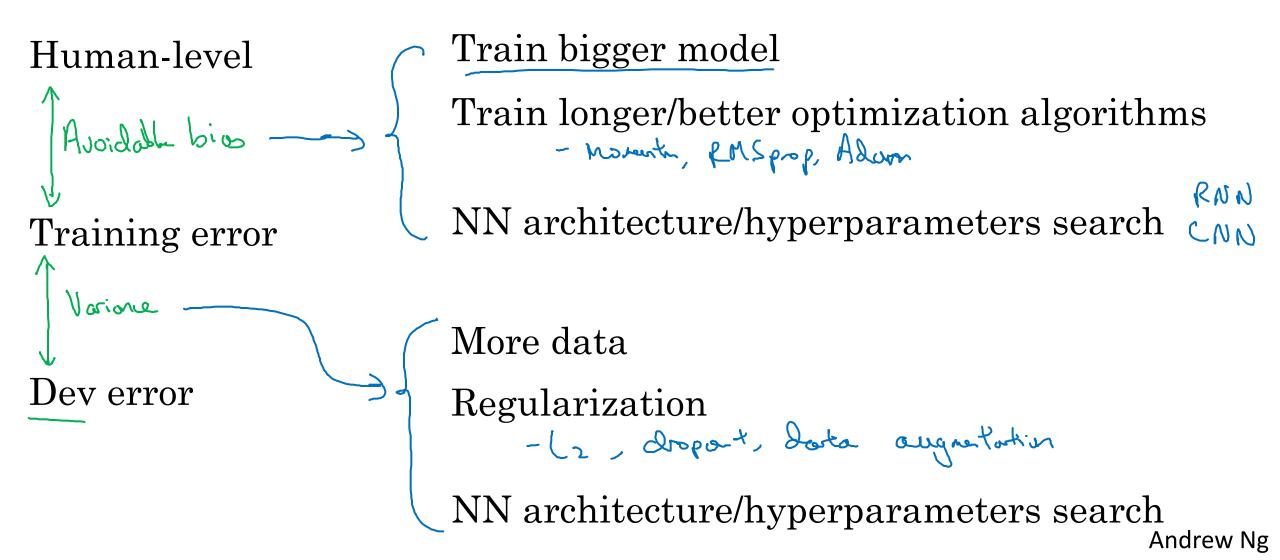

n Aroidable bios

2. The training set performance generalizes pretty well to the dev/test set.

### Reducing (avoidable) bias and variance

### Error Analysis

# Carrying out error analysis

### Look at dev examples to evaluate ideas

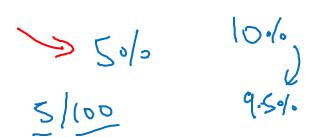

> 10% occuraç

Should you try to make your cat classifier do better on dogs?

Error analysis:

- 5 Get ~100 mislabeled dev set examples.
- · Count up how many are dogs.

#### Evaluate multiple ideas in parallel

Ideas for cat detection:

- Fix pictures of dogs being recognized as cats <
- Fix great cats (lions, panthers, etc..) being misrecognized <

• Improve performance on blurry images —

Image	Dog	Great Cats	Plury	Instagram	Comments
1	<b>/</b>			✓	Pitbull
2			<b>/</b>	V	
3		$\checkmark$	<b>V</b>		Rainy day at 200
:	:	· · · /	;	K	
% of total	8 %	(430/2)	6/º/0	12%	
		<b>~</b>	<b>←</b>	_	

### Error Analysis

# Cleaning up Incorrectly labeled data

#### Incorrectly labeled examples

DL algorithms are quite robust to random errors in the training set.

Systematic errors

Andrew Ng

### Error analysis

•	Image	Dog	Great Cat	Blurry	Incorrectly labeled	Comments				
$\uparrow$	•••									
	98				$\checkmark$	Labeler missed cat in background	$\leftarrow$			
	99		✓							
$\bigcup$	100				$\bigcirc$	Drawing of a cat; Not a real cat.	$\leftarrow$			
	% of total	8%	43%	$\underline{61\%}$	6%	V				
Overall dev set error 2%										
Errors due incorrect labels 0.6°/.   6.6°/.										
Errors due to other causes 9.4%   1.4%										
				1		2.10/0	1.9./6			

Goal of dev set is to help you select between two classifiers A & B.

### Correcting incorrect dev/test set examples

- Apply same process to your dev and test sets to make sure they continue to come from the same distribution
- Consider examining examples your algorithm got right as well as ones it got wrong. (2)
- Train and dev/test data may now come from slightly different distributions.

### Error Analysis

Build your first system quickly, then iterate

### Speech recognition example

- → Noisy background
  - Café noise
  - → Car noise
- Accent Guideline:

Young Build your first Stutter system quickly, then iterate

- → Set up dev/test set and metric
  - Build initial system quickly
  - Use Bias/Variance analysis & Error analysis to prioritize next steps.

### Mismatched training and dev/test data

Training and testing on different distributions

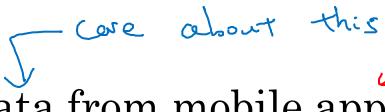

### Cat app example

#### Data from webpages

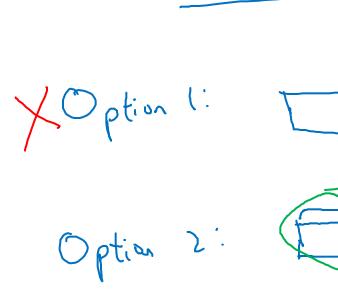

Data from mobile app

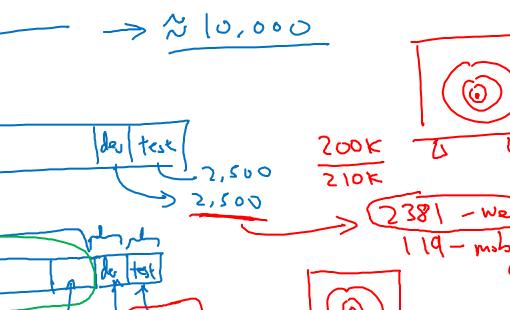

(mr. 792'000

Andrew Ng

### Speech recognition example

#### **Training**

Purchased data ×y

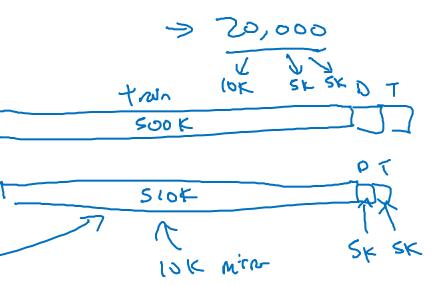

Smart speaker control

Voice keyboard

... 500,000 utbrances

#### Dev/test

Speech activated rearview mirror

deeplearning.ai

### Mismatched training and dev/test data

Bias and Variance with mismatched data distributions

### Cat classifier example

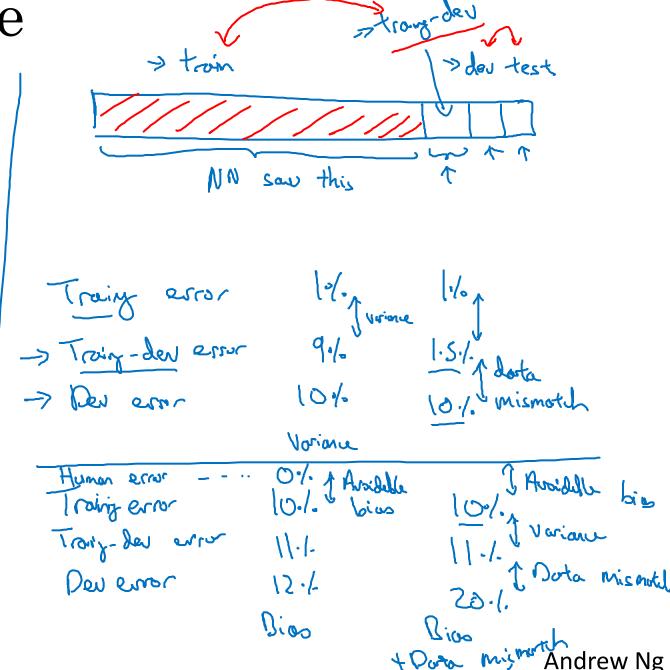

Assume humans get  $\approx 0\%$  error.

Training error

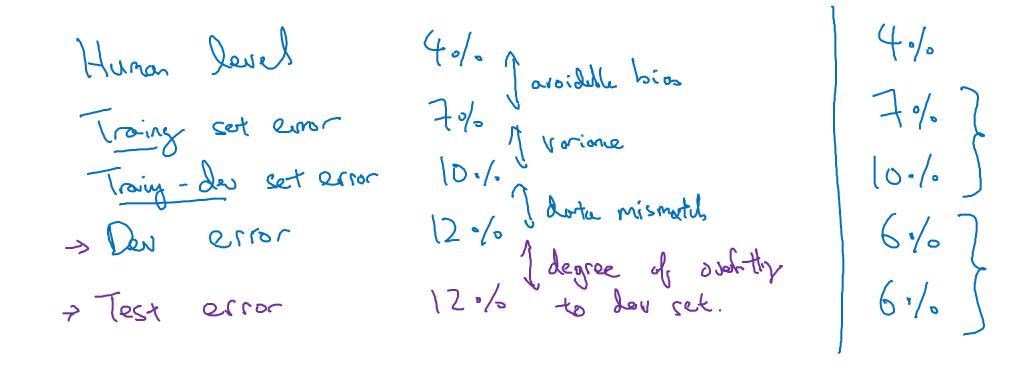

Dev error

10%

Training-dev set: Same distribution as training set, but not used for training

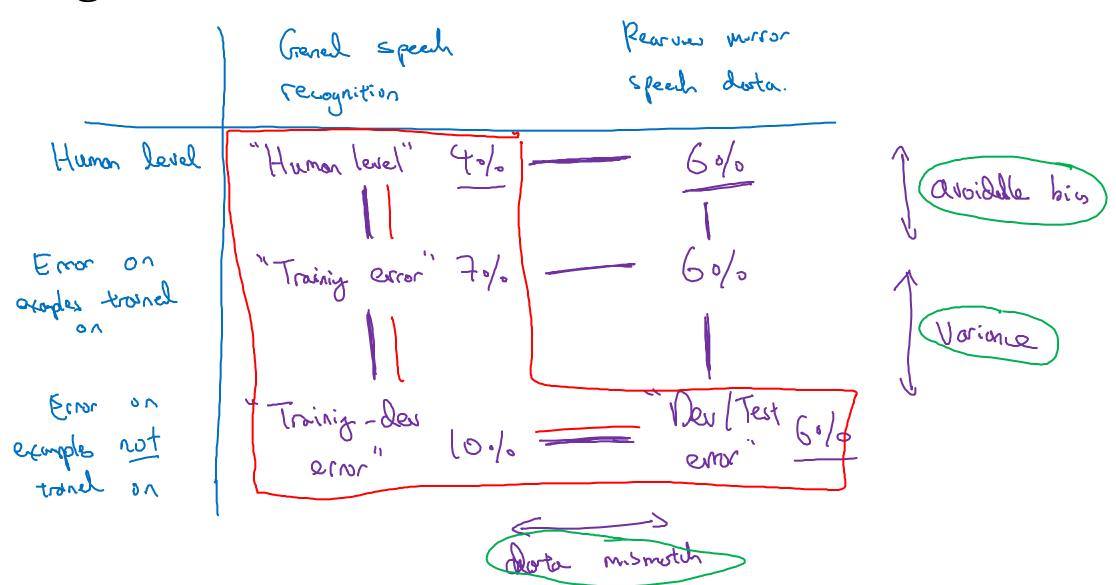

### Bias/variance on mismatched training and dev/test sets

### More general formulation

Reasures milror

### Mismatched training and dev/test data

# Addressing data mismatch

### Addressing data mismatch

 Carry out manual error analysis to try to understand difference between training and dev/test sets

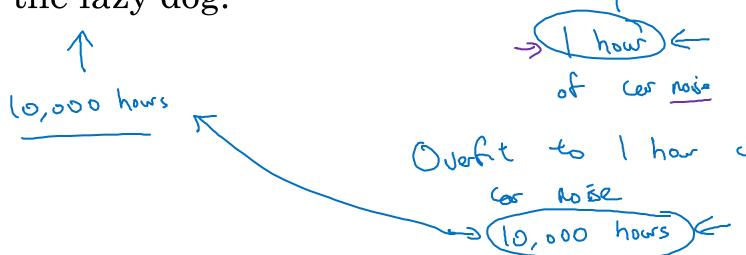

→ • Make training data more similar; or collect more data similar to dev/test sets

### Artificial data synthesis

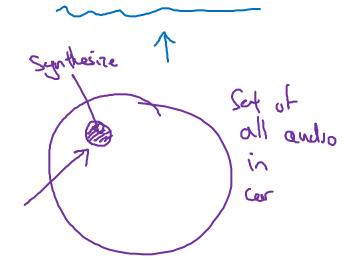

Car noise

"The quick brown fox jumps over the lazy dog."

Synthesized in-car audio

### Artificial data synthesis

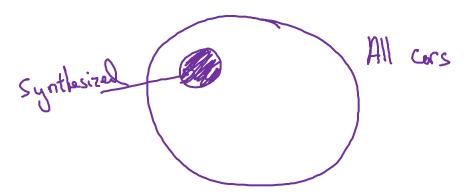

#### Car recognition:

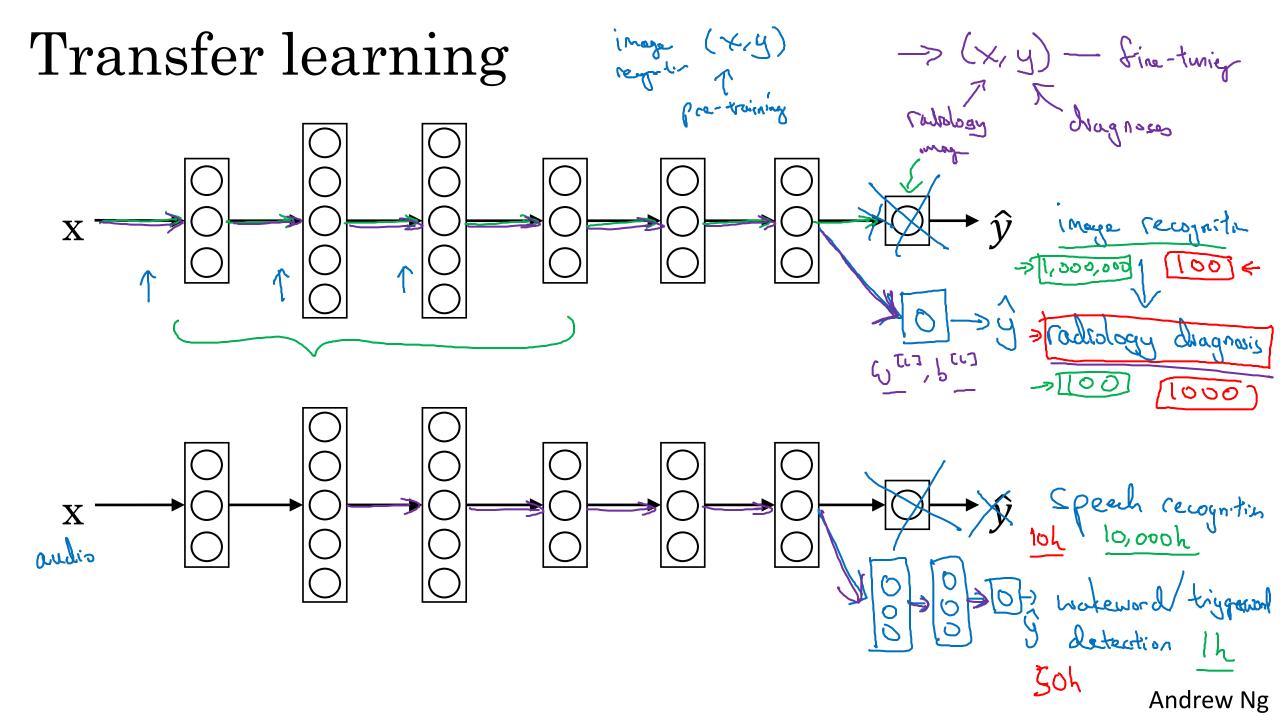

## Learning from multiple tasks

### Transfer learning

#### When transfer learning makes sense

Transh from A -> B

• Task A and B have the same input x.

• You have a lot more data for  $\underbrace{Task A}_{\uparrow}$  than  $\underbrace{Task B}_{\checkmark}$ .

• Low level features from A could be helpful for learning B.

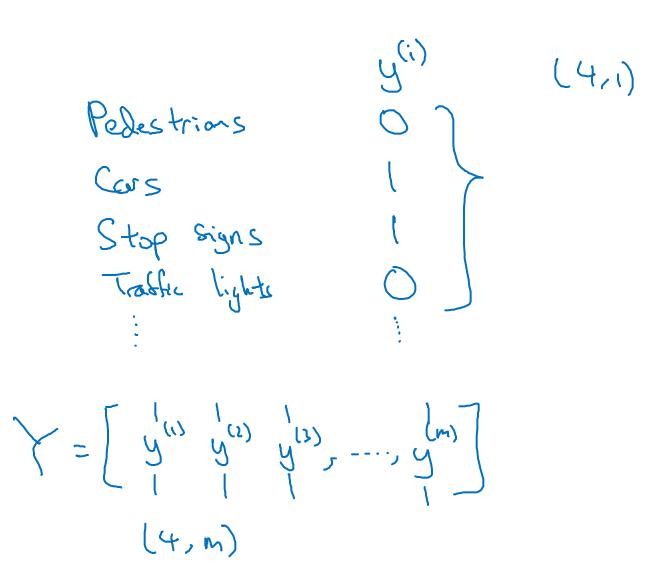

# Learning from multiple tasks

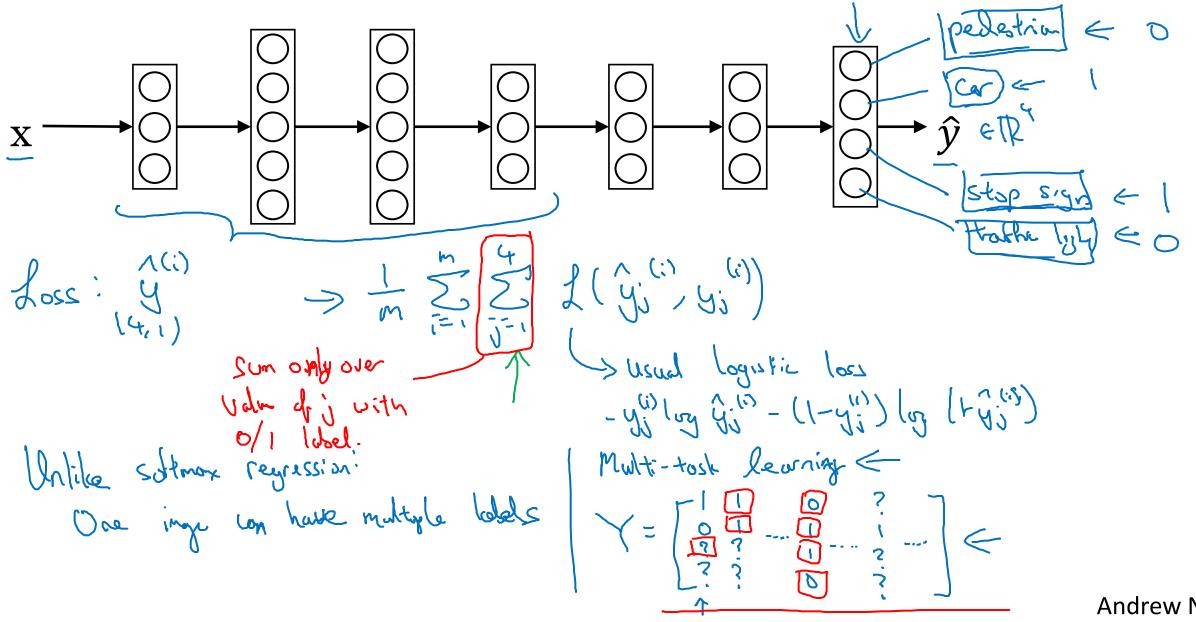

# Multi-task learning

### Simplified autonomous driving example

#### Neural network architecture

Andrew Ng

#### When multi-task learning makes sense

• Training on a set of tasks that could benefit from having shared lower-level features.

• Usually: Amount of data you have for each task is quite

similar. A 1,000
A, 1,000
A, 1,000
A, 1,000
A, 1,000
A, 1,000

• Can train a big enough neural network to do well on all the tasks.

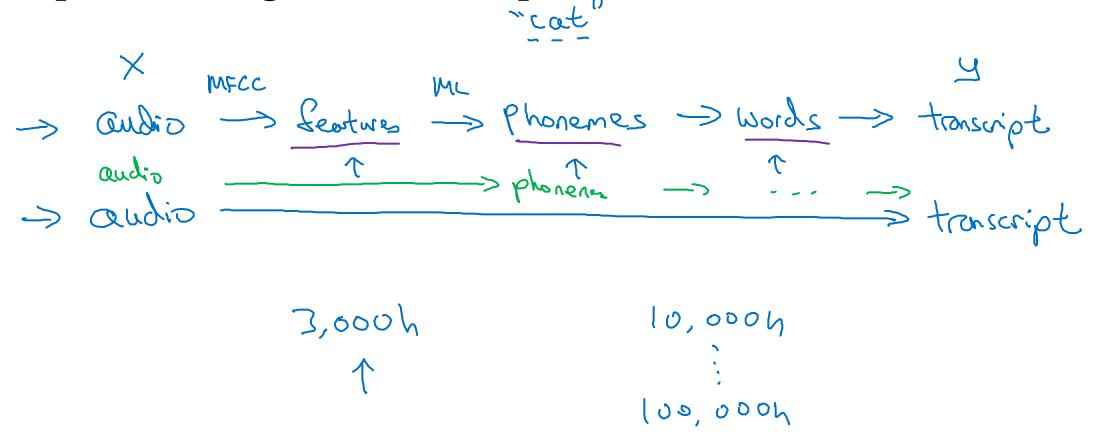

# End-to-end deep learning

What is end-to-end deep learning

### What is end-to-end learning?

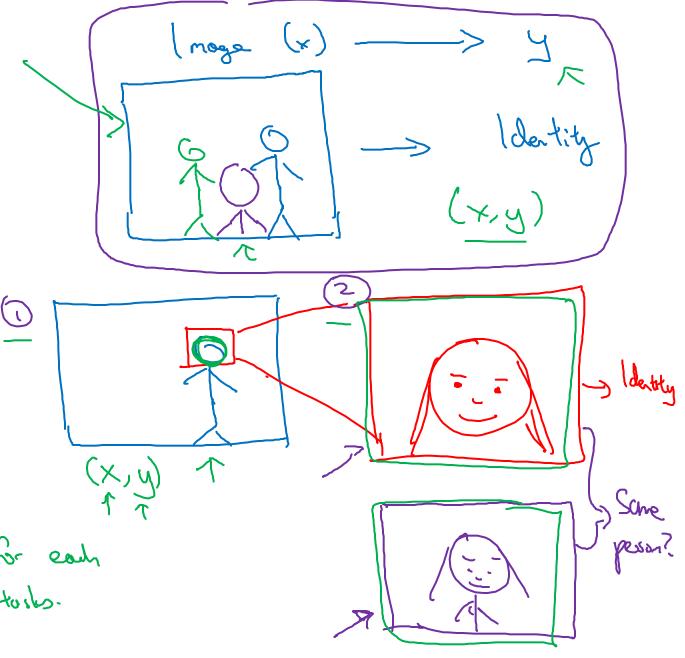

Speech recognition example

### Face recognition

[Image courtesy of Baidu]

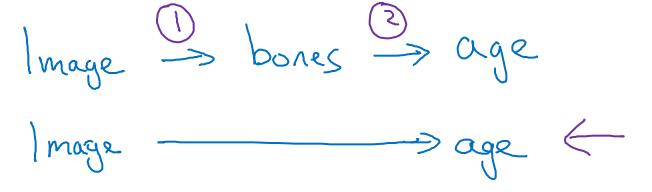

Andrew Ng

### More examples

#### Machine translation

Estimating child's age:

### End-to-end deep learning

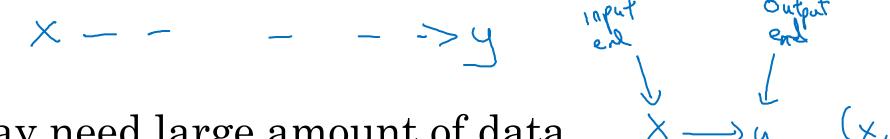

Whether to use end-to-end learning

### Pros and cons of end-to-end deep learning

#### Pros:

Cons:

- Let the data speak
- Less hand-designing of components needed

- May need large amount of data
- Excludes potentially useful hand-designed components

### Applying end-to-end deep learning

Key question: Do you have sufficient data to learn a function of the complexity needed to map x to y?
